

Inventory-Related Apps

Mobile Inventory by Bino Solutions (For Android Users)

play.google.com/store/apps/details?id=ro.bino.inventory&hl=en

Inventory app for stock counting, barcode scanning, stock taking, and warehouse inventory management.

Mobile Inventory helps you count stock as a team, scan barcodes fast, and track quantities across one or many locations from a phone or tablet. It works offline, has no ads, and keeps stock control simple for daily operations, audits, and warehouse workflows.

Inventory Scanner Stock Count (For Iphone Users)

apps.apple.com/my/app/inventory-scanner-stock-count

Scan barcodes, update quantities automatically, and export clean CSV files for Excel or Sheets.

Inventory Scanner Stock Count is built for small businesses, sellers, and operators who need a fast way to scan barcodes, count stock, and export the result.

Start a count session, scan items, and keep moving. Duplicate scans automatically update quantities, so you do not have to stop after every item. Review your live count list, edit quantities, rename items, and search inside the session when needed. When the count is done, export a clean CSV file that is easy to open in Excel, Google Sheets, or your own workflow. Use

recount and variance review tools when you need to compare expected and counted quantities.

Use it for:

- Small business stock counts
- Pop-up shop inventory checks
- Event seller inventory
- Backroom or shelf counts
- Office, asset, or library counts
- Simple barcode-based item counts

It focuses on one job: scan items, count stock, and export clean CSV.
